Learn how to fix or remove red eye from photos using this easy Photoshop tutorial. Red eye only becomes a major issue when you shoot with an open aperture. For example, the widest aperture, f/2.8, does not usually bring your subjects within the depth of field. In order to fix red eye “before the fact,” you may employ an easy Photoshop tutorial like this one. The first step essentially involves blurring or desaturating the red in the eye. Darkening the red enables the iris to be visually cut out. The second step is to bring back the red and adjust the color to the shadowy, yet natural blue. Here are detailed steps to do that: Take a quick look at what the different Adjustment Layers offer in Lightroom for beginners . Lightroom’s Adjustment Layers, which come with the program, enable precise control over the color balance of images. Adjustments, such as Exposure, Brightness, Contrast, and Saturation, adjust the overall color and tone of the image. You can use these settings to alter contrast, expose, and saturate your image. And, with the Grain & Detail, have control over how grainy the image appears. In this Lightroom announcement post, Adobe breaks apart the new Features of the new Lightroom 6. We can count ourselves lucky! If we were dealing with Australia back in the day... we would have to apply for a visa and for a visa we had to affix the same stamp to the immigration office and it is usually a really exorbitant cost for someone who cannot afford it. There was really no other option except to wait for months and then finally we might be able to see our family members! Don't worry for we have an online stamping service that makes our family trip a lot more easier to bear. With us the process is a lot less stressful and we can afford to take care of other things in life while our trip is on hold. In case you have come to PMDDruby on Rails to grab your information from the Ruby on Rails migration guide, you may have noticed that it's quite out of date. We've decided to change that and keep the project updated to ensure we get the right versioning for the project. We currently have three versions of migration (1.6.0.1, 1.8.0 and 2.0.0). You may have been warned about the upcoming 2.0.0 version by receiving the Notice of Rails Migration and migrating to 1.8.0 release. We believe that it's critical to have a migration guide that is up-to-date and matched with our other Ruby guides in the documentation. The most notable additions are the new multi-processor options, the ability to quickly review All Scenes in a document and the ability to double-click a selected layer to edit it. But one of the more interesting features is the one that was added for professional users: The new live mask tool enables you to paint the mask to your liking instead of using traditional transparency masks. Live masks are only viewable while editing the image but allow professional retouch enthusiasts to paint out all the background without having to mask something over it.
